

The Portable Unit

If there's one piece of technology responsible for the explosion in audio tour popularity, it's Espro-Acoustiguide's MyGuide system. Currently in use at over 150 sites worldwide, both indoors and outdoors, it is the most tried and tested digital interpretation system in the world. MyGuide tours guide millions of visitors through permanent sites and special exhibitions, in linear, random access and combination formats.

With its ergonomic design, MyGuide is comfortable for visitors to use and its large telephone-style keypad, backlit display and simple control buttons make it easy for anyone, young or old, to operate.

This sturdy hand-held unit with built-in speaker utilises solid-state memory chips to offer the flexibility of up to four hours of mono audio programming. Tours can be loaded on to each hand unit in a matter of seconds (via flashcards inserted into the compact programming /charging rack) enabling sites to offer different tours and foreign languages to visitors quickly and efficiently.

Design

- Long grip comfortable for use over long periods of time
- Easy-to-use for young children and older adults
- Built-in speaker
- Telephone-style keypad with large high contrast buttons
- Headphone jack plug for second listener
- Adjustable shoulder strap
- Interactive audio formats, such as random access, linear and combination tours with layers of information

Technology

- Durable casing and solid state internal design can withstand constant use both indoors and outdoors
- Easy content loading via a flashcard inserted into the charging rack
- Tours loaded automatically in a matter of seconds
- Units perform self-diagnostic tests and report status to charging rack
- Each unit contains a Built-in radio triggered alarm (optional)

MyGuide Wand

Capacity
